Subject: VAT Modernisation - Standardises VAT receipts/invoice

Dear Sir/Madam,

Having previously worked in [redacted], I always thought a standardised VAT receipt/invoice system would make the job a lot easier for caseworkers in the VAT repayment units as each receipt/invoice would contain all relevant information in the same place when investigating claims.

I also believe a centralised receipt/invoice system ran through Revenue that all VAT registered businesses must operate through for issuing receipts/invoices could also help with tackling VAT fraud. Basically, businesses could use some POS systems that automatically track any and all sales for their records which is linked in with Revenue, so Revenue agents could search through these in a much more efficient manner, something that could help audit staff.

Kind regards,
[redacted]
