

### Individualised Gross Incomes

Revenue statistics on income tax are generally published on a taxpayer unit basis, due to the way in which married couples and civil partners are assessed. Under the Irish tax system there are three options for assessment of married couples or civil partners which form the basis of assessment for tax purposes:

- Taxpayers who are married or in a civil partnership can be treated as jointly assessed, where one spouse/partner is chargeable to tax, not alone on his/her own income, but also on the total income of his/her spouse, with the 'assessable spouse' availing of the allowances, credits and reliefs available to both partners.
- If the couple do not wish to be jointly assessed they may elect for separate assessment, in this scenario each spouse is assessed and reliefs are divided between the spouses. In the case where one spouse's allowances, reliefs or rate bands are not fully used they may be transferred to the other spouse.
- Finally, if a married couple or civil partners do not wish to be jointly assessed or separately assessed they may elect to be assessed under separate treatment, where each spouse is treated for tax purposes as if unmarried.

In the case of jointly assessed and separately assessed married couples and civil partners, it is not possible for Revenue to provide an analysis on an individual basis as the tax liability of these individuals is not separately recorded, assessed or determined, and would not be possible to estimate as it would require an assumption of how the credits and bands would be split between both partners. Therefore, due to the inherent design of the Irish tax system, the tax liability for individuals is not available to be analysed for a majority of individuals in Ireland.

However, as gross incomes are separately recorded on tax returns (employer returns, Form 11, Form 12) it is possible to calculate the gross income on an individual taxpayer basis. The tables below provide a breakdown of the number of individuals in each of the given gross income ranges, along with the total gross income of these individuals. It should be noted that this table excludes individuals with zero gross income. Currently, data published on a taxpayer unit basis treats married couples/civil partners as one taxpayer unit regardless if that unit has one partner earning or two. In providing an analysis of these incomes separately, where both partners had an income they are counted as two individuals, but where only one partner had an income the other partner was not included in the analysis below.

It should also be noted that gross income as provided in this data is net of pension contributions made through employment, if applicable. Data in relation to 2019, and later years, includes additional taxpayers who would not previously have been included, specifically those in receipt of certain social welfare payments only, such as the State pension, who would not previously have been included by virtue of the fact that this income alone did not result in a tax liability. This change does not impact their position in terms of a tax liability, but data and systems changes associated with the introduction of PAYE Modernisation in 2019 has resulted in these taxpayers now being included in this data.

Data broken down by personal status for 2019 has been revised, and the breakdown by personal status from 2019 onwards represents a break in the series, due to revision and improvement of our statistical classification of taxpayers' personal status.
